

TENTOMA® 

5 ways to improve Insulation Packaging with RoRo StretchPack®

RoRo
STRETCH PACK

01

Six-sided packaging 100% sealed

To retain insulation properties it is important that insulation materials are protected from dirt and moisture.

With RoRo StretchPack® you will get a 6-sided packaging that is 100% sealed and waterproof.

02

Increase your packaging capacity

The RoRo StretchPack® packaging machines are designed to meet the rigorous demands of 24/7 industrial production.

This is achieved through features such as fast throughput time, a large film capacity, quick film roll changes, few wearing parts and minimal maintenance.

03

Use packaging to brand your company

RoRo StretchPack® uses a single-layer stretch hood film for packaging.

This enables you to have print on your packaging to stand out from competitors and boost your brand visibility.

04

Reduce film and energy consumption

RoRo StretchPack® perform a tight single-layer packaging without heat shrink and excessive film consumption.

It is an effective way to reduce film and energy consumption on your packaging line.

05

Remove the strapping process

Using RoRo StretchPack®, you can remove the strapping process from your packaging line.

Bearers and spacers can be included inside the packaging film.

The stretch hood film will then hold them against the bottom of your products.
